**Limited Time Offer!**

Cryo Lipo, also known as Cryolipolysis, is a non-surgical fat reduction treatment that uses controlled cooling to freeze and eliminate stubborn fat cells. It targets specific body areas where diet and exercise alone can't reduce fat – like the abdomen, thighs, arms, or love handles.

## How It Works

The device cools fat cells to a temperature that triggers natural cell death without harming the skin or surrounding tissue. Over the next few weeks, your body naturally flushes out these dead fat cells through the lymphatic system – resulting in a slimmer, more sculpted appearance.

## Popular Areas

- Abdomen
- Thighs
- Arms
- Back
- Love handles

## Benefits

- ✓ Non-invasive & painless procedure
- ✓ No downtime — resume normal activities immediately
- ✓ Permanent fat cell reduction
- ✓ Safe and clinically proven results

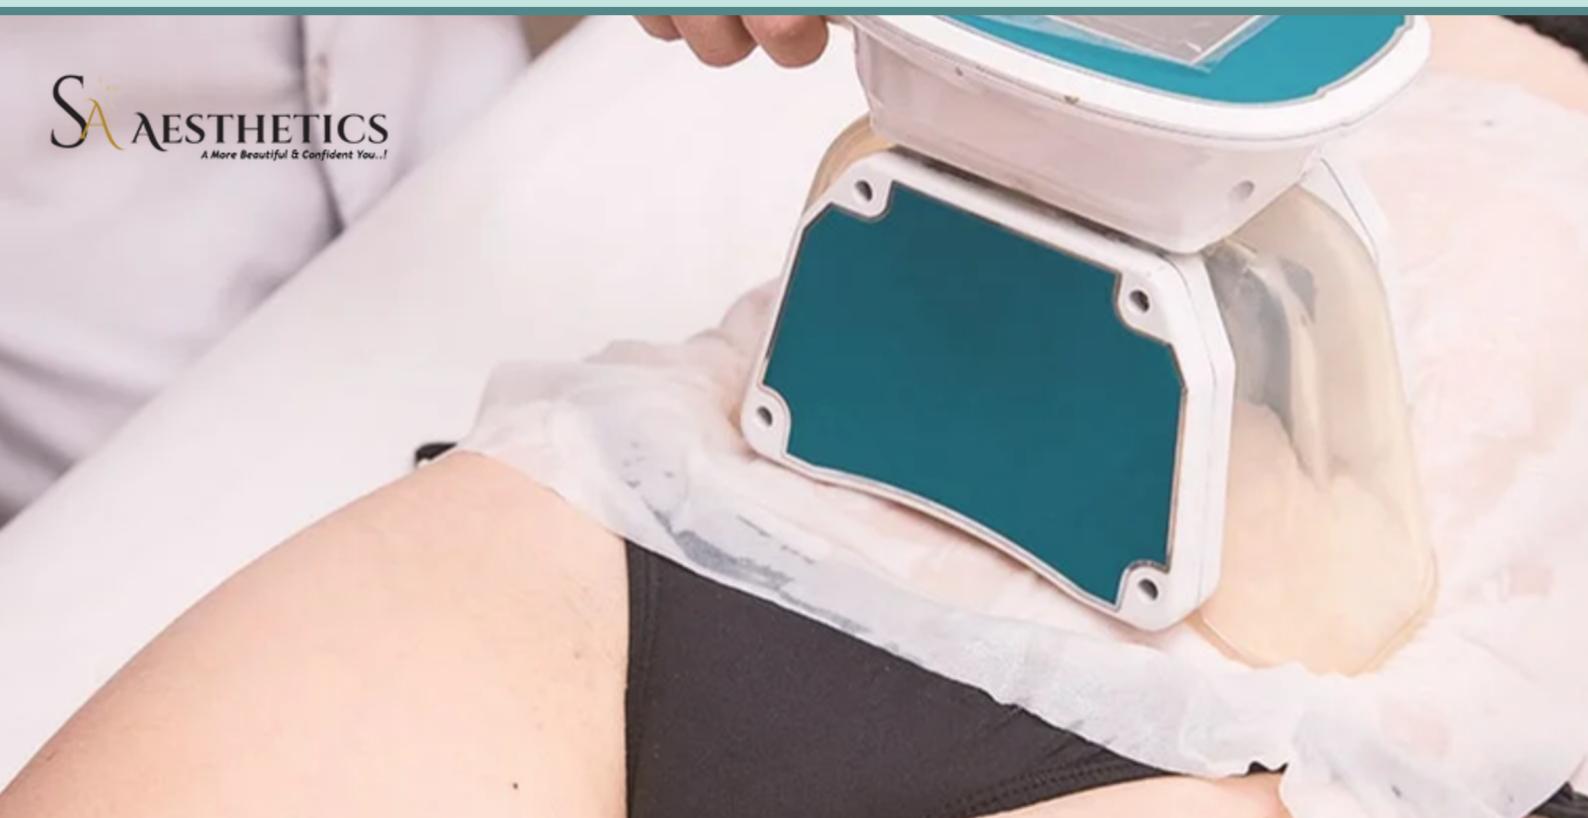

## Procedure Time & Sessions

- Each session usually takes 45-60 minutes per area.
- Most people need 1-3 sessions per area depending on fat thickness and desired results.

# Aftercare Tips

- Drink plenty of water to help flush out fat cells.
- Light exercise and a healthy diet enhance results.
- Avoid alcohol for 24-48 hours post-treatment.
- Mild redness or numbness may occur temporarily.

## Results

You'll notice gradual fat reduction starting from 3 weeks, with maximum results in 2-3 months. The treated area becomes visibly slimmer, smoother, and more contoured.

**It's one of the safest and most effective alternatives to liposuction – without surgery, needles, or downtime.**
